Olympics Winter Games
by Andrés Gallo

This is my Google Doc. for my JS charts in order to visualize data and look for trends in Olympics Winter. I am going to show this three thesis in three different charts.

1. *How many medals has Canada won compared to the rest of the world (taking like parameter the best ten countries)?*
2. *Who are the five best competitors in history?.*
3. *What percentage does each gender have in the number of medals won?*
4. *Is Canada winning more or less medals since it started to compete and how has been improving compared to the five best countries?*

I am going to prove my first thesis with an Area Polar chart since this one is perfect for comparing values.

The second one will be shown with a Horizontal bar chart it will be able to help me explaining who are the five best competitors and how many medals they have.

My third thesis will be explained with a pie chart to see the total amount of men and women that make up the whole obtaining of medals in Olympics Winter.

And finally, the fourth thesis will be proved with the use of a Line chart too; It allows me to show you with the route of a line if Canada has improved or not.
